Mech. Dev. 63:51-60(1997).

-I- FUNCTION: TRANSCRIPTION FACTOR INVOLVED IN THE INDUCTION OF OXYGEN REGULATED GENES. SPECIFICALLY RECOGNIZES AN 8 BP HYPOXIA RESPONSE ELEMENT (HRE), REGULATES THE VASCULAR ENDOTHEIAL GROWTH FACTOR (VEGF) EXPRESSION AND SEEMS TO BE IMPLICATED IN THE DEVELOPMENT OF BLOOD VESSELS AND THE TUBULAR SYSTEM OF LUNG. MAY ALSO PLAY A ROLE BLOOD VESSELS AND THE TUBULAR SYSTEM OF LUNG. MAY ALSO PLAY A ROLE BLOOD VESSELS AND THE TUBULAR SYSTEM OF LUNG. BIOL. Chem. 273:4451-4457(1997).

J. BIOL. Chem. 273:4451-4457(1997).

FUNCTION: TRANSCRIPTION FACTOR THAT MAY HAVE PLEIOTROPIC DEVELOPMENT IN COOPERATION WITH ARNT. IT MAY HAVE PLEIOTROPIC EFFECTS IN THE TISSUES EXPRESSED DURING DEVELOPMENT.

FOR SUBURIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH AND BHLH PROTEIN. HETERODIMER OF SIM2 AND ARNT.

FISSUE SPECIFICITY: TRANSCRIPTS WERE DEFCTED IN HIGH LEVELS KIDNEY FOLLOWED BY SKELETAL MUSCLE AND LUNG. LOW LEVELS WERE IN TESTIS, BRAIN AND HEART: IN EARLY FETAL DEVELOPMENT IT IS IN CNS, DEVELOPING KIDNEY, TONGUE EPITHELIUM AND CARTILAGE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diencephalic expression indicate a syndrome.":

"The genome sequence of Drosophila melanogaster.";
RL Science 287:2185-2195(2000).
CC -i- FUNCTION: PUTATIVE TRANSCRIPTION FACTOR INVOLVED IN THE GENERATION
OF BIOLOGICAL RHYTHMS. ACTIVATES CYCLING TRANSCRIPTION OF PERIOD
CC (PER) AND TIMELESS (TIM) BY BINDING TO THE E-BOX (3'-CACGTG-5')
PRESENT IN THEIR PROMOTERS. CYC MUTANTS DON'T DISPLAY PER AND TIM
CC CYCLING, AND ARE COMPLETELX ARRHYTHMIC.
CC -I- SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER
CC BHLH PROTEIN. FORMS A HETERODIMER WITH CLOCK IN ORDER TO ACTIVATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Harris N.L.,

TISSUE SPECIFICITY: EXPRESSED AT LEAST IN HEAD AND OVARY.

SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY

TRANSCRIPTION FACTORS. HOMOLOG OF HUMAN BMALL PROTEIN.

SIMILARITY: CONTAINS 2 PAS (PER-ARNT-SIM) DIMERIZATION DOMAINS.

SIMILARITY: CONTAINS 1 PAS-ASSOCIATED C-TERMINAL (PAC) DOMAIN.

SUBCELULAR LOCATION: Nuclear.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: UBIQUITOUS.
                                                          OF PAH PROCARCINOGENS.
SUBBURIT: EFFICIENT DAA BINDING REQUIRES
BHLH PROTEIN. FORMS AN HETERODIMER WITH
WITH OTHER BHLH PROTEINS. INTERACTS WITH
COLLED-COLL CONTAINING PROTEIN 3.
                                                                                                                                      BIOL. Chem. 269:28098-28105(1994).

BIOL. Chem. 269:28098-28105(1994).

FUNCTION: REQUIRED FOR ACTIVITY OF THE AH (DIOXIN) RECEPTOR. THIS PROTEIN IS REQUIRED FOR THE LIGAND-BINDING SUBUNIT TO TRANSLOCATE FROM THE CYTOSOL TO THE NUCLEUS AFTER LIGAND BINDING. THE COMPLEX THEN INITIATES TRANSCRIPTION OF A GENES INVOLVED IN THE ACTIVATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RTSDENRKQNHSEIEKRRRDKMNTYINELSSMIPMCFAMQRKLDKLTVLRMAVQHLR---
